SUMMARY

Software Engineer with 2 years of experience building XAPI, an API, data and AI governance platform at X-Venture. Specialized in Java, Spring Boot and microservices, designing REST and GraphQL APIs backed by MongoDB, with event-driven messaging (RabbitMQ) and deployment on Kubernetes and AWS. Experienced in data governance and data lineage, role-based access control, performance optimization, unit testing (JUnit, Mockito) and production support in Agile/Scrum teams. Brings full-stack experience in Angular and AI-assisted development with Claude Code and MCP.

WORK EXPERIENCE

Software Engineer | X-Venture Global Solutions (Pvt) Ltd *May 2025 - Present*
Colombo, Sri Lanka (Remote)

- Followed a design-first, **API-first** approach: designed each API as an **OpenAPI** specification on the XAPI platform before implementation, giving frontend and other teams a stable contract to build against in parallel.
- Developed XAPI's data governance core: REST APIs that let organizations catalog their data sources and model them as ER-style data models with datasets, fields and relationships.
- Designed and built **Business Lineage**, an interactive data map of how data flows between sources, data models and systems, backed by a **Spring for GraphQL** API with DataLoader batching (eliminating N+1 queries), cursor-based pagination and MongoDB aggregation pipelines.
- Built end-to-end **traceability** for governance assets with **event-driven** activity tracking that records every change as an audit trail across all assets.
- Hardened **role-based access control** across 6+ microservices and fixed a ThreadLocal flaw that could leak user session data between requests.
- Optimized authorization performance by batching permission loading, adding an in-memory **Caffeine** cache and managing it across service instances with **RabbitMQ**.
- Built secure video streaming for XCLP, the company's compliance learning platform, using **AWS CloudFront** signed cookies, and developed course, enrollment and authentication features in Spring Boot and Angular.
- Built an AI-assisted engineering workflow on **Claude Code** with custom **skills**, **subagents** and Kubernetes **MCP** servers across all environments, enabling AI agents to monitor production logs, trace bugs to the responsible service and inspect running services, with shared project context and guardrails on production access.
- Extended XAPI's **MCP server** to expose platform features as tools for AI assistants and added MCP access to customer subscription plans, bringing API and data governance into AI-driven workflows.
- Maintained code quality with **SonarQube**, remediated security vulnerabilities (XSS-safe file uploads, query injection, vulnerable dependency upgrades) and targeted 80% unit test coverage per feature with **JUnit** and **Mockito**.
- Delivered features in **Agile/Scrum** sprints using **Jira** for backlog grooming, sprint planning and tracking, collaborating with QA, frontend and product teammates through daily stand-ups, pull request reviews and sprint retrospectives.

Software Engineer Intern | X-Venture Global Solutions (Pvt) Ltd *Nov 2024 - May 2025*

- Configured and deployed WSO2 API Manager to explore API lifecycle management and policy enforcement.
- Built a serverless API-to-Postman collection converter on AWS Lambda.
- Contributed to XAPI backend services in Java and Spring Boot (catalog and project scopes).
- Adopted the team's engineering practices (Git workflow, code reviews, Agile ceremonies) by working closely with senior engineers, and applied them to deliver backend features with the team.

SKILLS

- **Languages:** Java, TypeScript, JavaScript, Python, SQL
- **Backend:** Spring Boot, Spring Framework, Spring Security (OAuth2, JWT), Spring for GraphQL, Spring Data MongoDB, REST APIs, API Design (OpenAPI), GraphQL, Microservices, Event-Driven Architecture
- **Databases & Messaging:** MongoDB (aggregation, indexing, migrations), MySQL, OpenSearch, RabbitMQ, Caffeine
- **Cloud & DevOps:** AWS (CloudFront, S3, Lambda, EC2), Docker, Kubernetes, Helm, CI/CD, Linux
- **Security:** Role-Based Access Control (RBAC), Keycloak, SonarQube
- **Frontend:** Angular
- **Testing & Tools:** JUnit 5, Mockito, Postman, Git, GitHub, Jira, IntelliJ IDEA, Maven, Gradle
- **AI & Productivity:** Claude Code, Model Context Protocol (MCP), Cursor, GitHub Copilot
- **Methodologies:** Agile, Scrum, SDLC
- **Domain:** API Governance, Data Governance, Data Lineage, Compliance (PDPA)

EDUCATION

BSc in Computer Science | University of Colombo School of Computing *May 2022 - May 2025*

G.C.E. Advanced Level | Eheliyagoda Central College *Aug 2018 - Aug 2020*
